

# Package

May 18, 2019

**Title** What the Package Does (one line, title case)

**Version** 0.0.0.9000

**Description** What the package does (one paragraph).

**Depends** R (>= 3.6.0)

**License** What license is it under?

**Encoding** UTF-8

**LazyData** true

**RoxygenNote** 6.1.1

## R topics documented:

read\_municipio . . . . . 1

**Index** 3

---

read_municipio	<i>Download shape files of municipalities</i>
----------------	---

---

## Description

Download shape files of municipalities

## Usage

```
read_municipio(year = NULL, cod_mun = NULL)
```

## Arguments

year	the year of the data download (defaults to 2010)
cod_mun	7-digit code of the municipality. If a the two-digit code of a state is used, the function will load all municiplaities of that state. If not informed, all municipalities will be loaded.

**Examples**

```
## Not run:  
  
library(geobr)  
  
# Read specific municipality at a given year  
mun <- read_municipio(cod_mun=1200179, year=2017)  
  
# Read all municipalities of a state at a given year  
mun <- read_municipio(cod_mun=12, year=2010)  
  
## End(Not run)
```
